Weatherproofing

RLX-WPK001

The use of this weatherproofing kit provides an additional moisture seal for cable connections. It also prevents loosening of connections from vibration or other external stresses which would eventually allow moisture penetration.

The application of sealing materials to antenna cable connections protects them from weather conditions. These include moisture penetration and loosening of connections from vibrations caused by strong winds.

Each kit provides adequate materials for up to 20 typical N-type connections on LMR-type cable, less if used with Heliac or LDF5/CVX5 cables, due to their larger diameter.

Additional Products

ProSoft Technology offers a full complement of hardware and software solutions for a wide variety of industrial communication platforms.
