

Johnson Controls Metasys Slave Interface Module MVI71-N2

Ideal for Energy Management Applications

Applications benefiting from the N2 module are prevalent in commercial building and energy management projects. Single or multiple processor applications will benefit through reduced installation costs and increased functionality.

How to Contact Us: Sales and Support

All ProSoft Technology products are backed with unlimited technical support. Contact our worldwide Technical Support team directly by phone or email:

DISCONTINUED

Johnson Controls Metasys Slave Interface Module

MVI71-N2

The inRAx Johnson Controls N2 Communication Module allows Rockwell Automation PLC I/O compatible processors to interface easily with other Johnson Controls N2 master devices.

Features and Benefits

The inRAx module acts as an input/output module between the Johnson Controls N2 network and the Rockwell Automation backplane. The module acts as a slave receiving commands from a master device. The data transfer from the processor is asynchronous from the actions on the Johnson Controls Metasys network. An internal database in the module exchanges data between the processor and the Johnson Controls Metasys Master (NCM, N-30, NAE, NIE).

General Specifications

- Single Slot – 1771 backplane compatible
- The module is recognized as an Input/Output module and has access to processor memory for data transfer between processor and module
- Ladder Logic is used for data transfer between module and processor. Sample ladder file included.
- Configuration data obtained from configuration text file downloaded to module. Sample configuration file included.

Hardware Specifications

Specification	Description
Form Factor	Single Slot 1771 chassis compatible BTR/BTW data transfer Local or remote rack
Backplane current load	800 mA @ 5 V
Operating temperature	0 to 60°C (32 to 140°F)
Storage temperature	-40 to 85°C (-40 to 185°F)
Shock	30g operational 50g non-operational
Vibration	5 g from 10150 Hz
Relative humidity	5 to 95% (non-condensing)
LED Indicators	Module status Backplane transfer status Application status Serial activity and error LED status

Specification	Description
Debug/Configuration port (CFG)	
CFG Port (P1)	RJ45 (DB-9M with supplied cable) RS-232 only
Configuration Connector	RJ45 RS-232 Connector (RJ45 to DB-9 cable shipped with unit)
Application Ports	
Application Serial port (P2, P3) (Serial Modules)	(2) RJ45 RS-232/422/485 Application ports

Functional Specifications

Some of the general specifications include:

- Support for the storage and transfer of internal database registers to/from the processor's N files.
- Two ports to emulate a Johnson Controls N2 slave
- Supports the following N2 objects:
 - Binary Input: Up to 960 points
 - Analog Output: Up to 300 points
 - Binary Output: Up to 960 points
 - Analog Output: Up to 300 points
- Supported Commands/Sub-commands
 - 0/4: Poll Message No Acknowledge
 - 0/5: Poll Message with Acknowledge
 - 0/9: Status Update
 - 1/1: Read Analog Input Attributes
 - 1/2: Read Binary Input Attributes
 - 1/3: Read Analog Output Attributes
 - 1/4: Read Binary Output Attributes
 - 2/1: Write Analog Input Attributes
 - 2/2: Write Binary Input Attributes
 - 2/3: Write Analog Output Attributes
 - 2/4: Write Binary Output Attributes
 - 7/2/3: Override Analog Output
 - 7/2/4: Override Binary Output
 - F: Identify Device Type
- The following commands are recognized, and acknowledged, but are not communicated in any way to the processor, and do not return any data:
 - 0/0: Time Update
 - 0/8: Warm Start
 - All other commands return a Bad Command Error Code
- Configurable through the configuration file for the following:
 - Slave Address (assignable individually for Port 1 and 2)
 - Analog Input Object Count
 - Binary Input Object Count
 - Analog Output Object Count
 - Binary Output Object Count

- Warning and Alarming functions performed on Analog Input and Binary Input data types
- Change of State Response buffering
- Communication status error codes and statistics returned per port

Memory mapping is pre-assigned to optimize data access and to ease implementation

A port configured as a Johnson Controls N2 slave permits a remote master to interact with data contained in the module. This data is derived from the processor.

Additional Products

ProSoft Technology offers a full complement of hardware and software solutions for a wide variety of industrial communication platforms.
